# CYBER INSECURITY

Meet Alice and Bob. They feel comfortable online, but judge their cyber security knowledge as limited. Like 75% of respondents, they reuse passwords. Luckily, as 23% of participants they have adopted passphrases over simple passwords.

The survey was answered by 37 participants. All participants were between 18 and 29 years old. 13 participants referred to themselves as female, 2 as non-binary. All participants were university students, 27 in computer science related disciplines.

Similar to 72% of respondents, they use two-factor authentication on their most important accounts.

Just as 31%, they keep backups of their photos online and offline. Like 58%, they use a password manager.

Did you know? 22% of participants have been victims of cyber attacks.

Alice and Bob value their privacy. They think that GDPR doesn't protect them enough just like 39% of participants. They oppose a government backdoor to encrypted communication, like via WhatsApp, as 91% of respondents.

In line with 83% of the participants, Alice and Bob prefer anonymity over personalized ads. However, like 67% they're not willing to pay for websites such as Facebook. In fact, 39% of respondents think they should be paid for their data.
